

Legacy App Modernisation

We recognise that it's not always possible to replace an existing application!

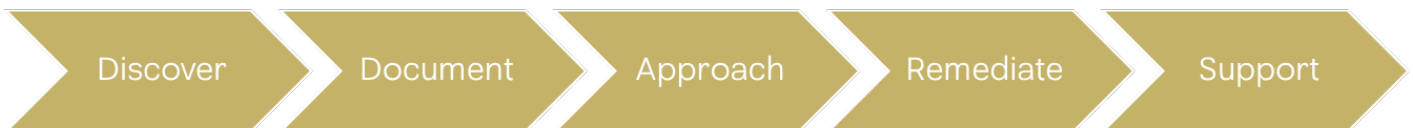

Most organisations have applications that require modernisation. Most commonly this need for change is forced by external factors, such as infrastructure, regulatory requirements, support needs or audit compliance.

Each client has a potentially different need for each application. Our team of experienced consultants work with you to understand these needs.

Our aim is to ensure that your application is back to meeting the demands of your business.

Key Pillars of our Legacy App Framework

We work with clients to **discover and document** the existing state of the application. We spend time understanding the requirements of the system, and any problem areas. Our initial discovery phase will provide you with both the options open to you and recommendations on the benefits of each of these.

We ascertain all the third party and external touch points and interfaces, and **formulate an approach** that will solve the problem.

To **remediate your application**, we make use of a number of toolsets and methodologies, depending on the problem being addressed. This can include an armoury of development tools that allow us to rework, where reasonable, into a modern architecture.

We can move the application onto our cloud estate giving you continued, **supported access** to it, while removing the need for internal infrastructure planning once and for all.

"There are times when perfectly good, albeit aging, applications become no longer viable within an organisations IT strategy due to advances in the underlying infrastructure.

One of the most common scenarios we encounter is applications that are currently outwith any support framework.

We will undertake to support any application that we work on for you."

Why Choose Quorum?

We have a successful track record of providing clients with the means to move legacy applications onto modern and supportable platforms.

We have a demonstrable approach that allows the investment made in older systems and processes to continue to be realised in line with modern IT systems and practices.

We take a cloud and security first approach, so any legacy infrastructure costs and maintenance can be retired and you can be safe in the knowledge that your data is safe.

We are a full Managed Services provider and we will undertake to support any application that we work on for you. We can also manage any other area of your IT estate where necessary.

Our modernisation service means you never have to be haunted in the future by the decisions you made in the past.

Contact us to discuss how we can manage and deliver your IT transformation to help you deliver and perform.
